### [Equilon 100](#)

(Boldenone shown without ester)

(Boldenone + 4 esters)

(1, 4-androstadiene-3-one, 17b-ol)

Formula (base): C<sub>19</sub>H<sub>26</sub>O<sub>2</sub>

Formula (esters)

Acetate: C<sub>2</sub> H<sub>4</sub> O<sub>2</sub>

Propionate C<sub>2</sub>H<sub>6</sub>O<sub>2</sub>

Cyclopentylpropionate: C<sub>8</sub> H<sub>14</sub> O<sub>2</sub>

Undeclynate: C<sub>11</sub>H<sub>20</sub>O<sub>2</sub>

Molecular Weight (base): 286.4132

Molecular Weight (esters):

Acetate: 60.0524

Propionate: 74.0792

Cyclopentylpropionate: 132.1184

Undeclynate: 186.2936

Manufacturer: WDV Pharma

Effective Dose (Men): 200-600mgs/week

Effective Dose (Women): 50-100mgs/week

Active life: 15 days

Detection Time: Up to 5 months

Anabolic/ Androgenic ratio: 100:50

Basically what weâ€™re looking at here is the [Equipoise](#) (Boldenone) version of Sustanon. Itâ€™s got 4 esters, 2 of which are long-acting and 2 of which are slow-acting:

Acetate: 10mgs

Propionate: 30mgs

Cyclopentylpropionate (Cypionate) 20mgs

Undecylate: 40mgs

Now, a multi-estered product (even Eq) is pretty much a forgone conclusion because a steroid savvy chemist learned of the popularity among athletes of Sustanon, and figured out that Eq (Boldenone) is a likely candidate for such a multi-estered blend. The odd thing about this product is the presentation. It comes in 6ml vials! This is the kind of thing that always leaves me speechless and scratching my head wondering why someone would do something like this. I mean, 10mls is usually the industry standard, and it gives us nice round numbers to work with when planning our cycles. The only thing I can think of is that generally, 400-600mgs (and usually the latter) is the recommended dose for athletes. This product has 600mgs per bottle, so at the optimal dose a bottle will last an average male athlete or bodybuilder a week. Now Iâ€™m waiting for a 7ml bottle of something with a propionate ester, specifically made to last a week with everyday injections.
